- CDFSE “surface enclosures” are designed to mount flat on the ceiling and extend only 6 in. into the room
- CDFRE “recessed enclosures” have no protrusions outside recess box, allowing the heater to recess only 7 in. into ceiling space. Mounts in T-Bar or permanent ceiling with trim ring
- 208V and 240V heaters can be field-converted from single- to three-phase operation. 5,000-watt heater can be field-converted to 3,800 or 2,500 watts and 4,000-watt heater to 3,000 or 2,000 watts
- BMS-compatible with use of relays
- Three adjustable airflow patterns from 14 ft. ceilings: wide, narrow or asymmetrical patterns
- Automatic fan delay eliminates cold drafts on start-up and discharges residual heat from the heater body during shut down
- Automatic thermal cutout: shuts off the heater in the event of over-heating and reactivates heater when temperature returns to normal
- Easy installation: Thumb pins align and temporarily hold enclosure cover to heating section freeing both hands to finish installation

Dimensions and Clearances:

Adjustable Airflow Options:

Wide Pattern

(24x8 ft. coverage)
In standard ceiling applications (8-10 ft.), heater disperses the air to give a gentle, less pronounced pattern while circulating all the air from floor to ceiling.

Narrow Pattern

(8x8 ft. coverage)
For high ceiling applications (11-14 ft.), fan concentrates the heated air to ensure full penetration to the floor level.

Asymmetrical Pattern

(17x10 ft. coverage)
Heated air is directed in a specific direction, allowing the heater to be located where space allows, with the heated air delivered to where it is required.
