

SUBMITTAL SHEET

Commercial Sill-Height Convection Heaters Type CSH

DIMENSIONS

Type	Height	Width	Length
CSH05A	5-1/2"	3"	28" to 10'
CSH07A	7"	5"	28" to 10'
CSH14A	14"	5"	28" to 10'

Minimum Mounting Height Above Floor	
Up to 250W/Ft.	1-3/4"
Over 250W/Ft.	3"

ARCHITECT/ENGINEER SUGGESTED SPECIFICATIONS*

Heaters shall be low profile (3" x 5-1/2" x 7", 5" x 14") and available in lengths from 28 inches through 10 feet. Enclosures shall be 16 gauge, furniture quality steel with reinforced, all welded construction; designed to withstand heavy-duty commercial and institutional use. Enclosures shall be chemically-treated to resist corrosion. Finish shall be mar and temperature-resistant to retain contemporary appearance throughout years of rough use.

For safety, the electric heating bank shall consist of metal sheath heating elements. The elements shall have a copper clad steel for strength and corrosion resistance, and aluminum fins for faster heat transfer. One, two, or three, low density elements shall be installed side-by-side on the same plane to uniformly warm all incoming air. Elements shall be center-anchored and shall float freely on each end through nylon bushings for quietness.

Discharge louvers shall be closely spaced steel to direct

heat away from wall and to minimize wall surface temperatures and control dirt streaking.

A 1/4-inch mesh screen shall be installed beneath the discharge grille to deter the insertion of foreign objects. Optional built-in controls shall include single-pole, double-pole, or two-stage thermostats, power on/off switch, transformer relay and power relay. The thermostat shall be capable of controlling multiple units on a pilot duty circuit. (Observe the control limitations indicated.)

Thermostat adjustment shall be with a thin-bladed screwdriver through the discharge louvers and shall be considered tamper-resistant. An automatic reset thermal overheat protector shall run the full-length of the heater and shall turn off heating elements should overheating occur at any point along heating length. Overheat protector shall restore operation automatically when cause of overheating is removed.

Heaters shall be designed with a built-in pre-wired race-

way to enable multiple unit wiring from one feeder source.

Back panel shall be one-piece heavy gauge painted steel completely finished, and shall be suitable for mullion to mullion mounting in front of a glass curtain wall. 28-inch control sections, finished to match the heating units, shall be available with factory built-in mercury contactors, circuit breakers, control transformer, PE, switch or SCR controls. This control section shall also be furnished blank, as an optional accessory, for field installation of controls.

All heaters and electrical accessories shall be labeled by Underwriters' Laboratories, Inc.

Accessories shall include end caps, blank sections (28" blank sections shall be designed for field-cutting), inside and outside corners, splice plates, and telescoping filler sections. All accessories shall be completely enclosed to enable the installer to pull standard wiring form heater to heater through the accessories.

* QMark reserves the right to change specifications without prior notice.

APPLICATION LIMITATIONS AND PRECAUTIONS

A. Hazardous Atmosphere - Because the possibility of a concealed spark can exist from the built-in overhead cutout, heaters should not be used in potentially explosive atmospheres.

B. Corrosive Atmosphere - The high quality finish and steel internal sheet metal parts will give excellent service under most operating conditions, including coastal salt air and industrial atmospheres. However, the finish is not intended for direct salt spray exposure in marine applications or highly corrosive greenhouse, swimming pool, chemical storage or industrial atmospheres.

C. Cleanliness - Although specifically designed for mounting below window areas, heaters can be installed on plaster, wood paneled, metal, masonry, or composition wall surfaces with reasonable expectation of clean wall operation. Should some soiling occur, after a period of years, smooth walls may be cleaned with standard maintenance materials. For deep textured walls, consideration should be given to choice of enclosure height and watt per foot capacity - generally, the enclosure

with lowest surface temperature will have the least soiling tendency.

D. Comfort - Optimum room comfort results when heater is mounted just below the window sill, since window cold down draft is eliminated and maximum convection air distribution without stratification is maintained throughout the room. Because of the tendency for warm air to stratify, installing heaters close to ceiling is not recommended. If it should be necessary, at least 18" clearance above the air discharge must be maintained. Bottom of heaters are not intended for attractive appearance when mounted above eye level.

E. Air Throw - Since heaters provide only natural convection air throw, they are not blasts through high traffic, main entryways and vestibules. Heaters will maintain satisfactory comfort conditions in low traffic, side entryways and vestibules, but for most entryways, faster response fan driven heaters would be preferred.

F. Curtains, drapes, or blinds - should clear the top of the heater by at least six inches. Never permit draperies

to completely cover the unit. Furniture - should be placed so it does not touch the heater and so it does not completely block the air vents. Allow at least four inches free space between furniture and the heaters.

G. Recess mounting - UL labeled for free standing wall surface mounting only. Not recommended for mounting behind built-in book shelves, storage cabinets, window seats, etc..

H. In institutional applications such as hospitals, nursing homes, child day-care centers, and clinics. It is recommended that low-watt density convectors be used to provide optimum comfort at lowest case temperatures.

I. Due to variations in vinyl compositions and their potential to discolor, the use of stand-off brackets (SO1 or SO2) and/or specifying a lower watt density unit may be required when installing on vinyl wall coverings or under vinyl window dressings. Prior to setting specifications, consult factory for installation recommendations.

TYPICAL INSTALLATION

FRONT OUTLET MODEL
 Front outlet is available on Catalog No. CSH14A heaters only, in 125, 188 and 250 watts/foot configuration. Outlet mesh is not available on front outlet models.

Optional Built-in Control Specifications

Optional built-in Control (CATALOG No. Suffix)	Rating
1-Pole Thermostat (-T)	Thermostat adjustable through grill; tamper resistant; range 60-120°F; rated 24 amps @ 120-240 VAC and 22 amps @ 277 VAC; Pilot Duty rating of 125 VA @ 24-277 VAC.
2-Pole Thermostat (-2T)	Thermostat adjustable through grill; tamper resistant; range 60-120°F; rated 24 amps @ 120-240 VAC and 22 amps @ 277 VAC; Pilot Duty rating of 125 VA @ 24-277 VAC.
2-Stage Thermostat (-2ST)	Thermostat adjustable through grill; tamper resistant; range 60-120°F; rating (per stage) 24 amps @ 120-240 VAC and 22 amps @ 277 VAC; Pilot Duty (per stage) 125 VA @ 24-277 VAC; 3°F differential between stages.
Power On/Off Switch* (-DS)	Power on/off switch energized through grill; Tamper resistant; double pole single throw switch rated 20 amps (per pole) @ 120-277 VAC.
Transformer Relay (-TR)	Single pole relay with 24 volts holding coil and built-in transformer; relay contacts rated 24 amp @ 120-240 VAC and 22 amps @ 277 VAC for 07 and 14 units; 22 amps @ 120-240 VAC and 19 amps @ 277 VAC for 05 units. 24 volt control.
Power Relay (-PR)	Single pole magnetic relay rated 25 amps @ 120-277 VAC; available with 24, 120, 208/240, or 277 VAC holding coil.
1-Pole Thermostat and Power On/Off Switch (-TDS)	Line voltage control, both thermostat and on/off switch in power circuit; thermostat adjustable through grill (range 60-120°F); power on/off switch energized through grill; control combination rated 20 amps @ 120-277 VAC.
Power On/Off Switch and Transformer Relay (-DSTR)	Line voltage control (requires a remote 24V Pilot Duty thermostat); both power on/off switch and transformer relay in power circuit; dis-connect switch energized through grill; control combination rate 20 amps @ 120-240 VAC and 19 amps @ 277 VAC.
Power On/Off Switch and Power Relay (-DSPR)	Line voltage control; both power on/off switch and power relay in power circuit; requires a remote control voltage and thermostat for power relay (holding coil voltages available: 24, 120, 208/240, 277 VAC); power on/off switch energized through grill. Control combination rated 18 amps @ 120-277 VAC.
Pilot Duty Thermostat (-PDT)	Thermostat adjustable through grill; tamper resistant; range 60-120°F; thermostat (rated 125 VA @ 24-277 VAC) is wired for Pilot Duty operation of Power Relay (PR) or Transformer Relay (TR). See circuit amperage restrictions with -PR or -TR.
120V Duplex Receptacle (-R)	20 amp duplex receptacle built into left or right end cap of 6, 9, 12 or 18-inch filler section.

NOTES:

These control options are available on all models as built-in components. In cases where the amperage of the heater (or heaters) exceeds the rated limit of the control, multiple controls must be specified.

Example: CSH07-8750
240 Volt Single-Phase
Pilot Duty Thermostat & Power Relay Required
Rated 25 Amps
Order: CSH07-8750-PDT-2PR (240V holding coil)

240 volt, 1 PH supply
For 3-phase operation, multiple controls must be specified

Example: CSH07-8750
240 Volt 3-Phase
Pilot Duty Thermostat & Power Relay Control
Order: CSH07-8750-PDT-3PR
240 Volt, 3 PH supply

*2 required for 3-phase units & single-phase units over 20A.
