HUH SERIES ARCHITECT'S AND ENGINEER'S SPECIFICATIONS*

Furnish and install where indicated on plans, electric unit heaters suitable for small and large areas and UL and CUL listed for wall or ceiling mounting.

The cabinet shall be made of 22 gauge steel, welded, and phosphate coated to resist corrosion. Side, front, and back panels shall be removable without dismounting the heater by removing four screws from inside the control compartment, thus permitting full access to the elements and fan motor areas. Individual adjustable louvers with 30 degree downward stops shall be furnished to provide desired control of discharge air. The control compartment shall be located at the bottom of the cabinet and provided with a swing down hinged cover to permit full access for cleaning and servicing without dismounting the heater. All heater and control wiring shall terminate inside the control compartment. The heater shall be provided with combination wall/ceiling bracket for 5.0 KW and 7.5 KW units and shall have capability of full horizontal and vertical positions. The cabinet shall be finished in a beige polyester powder paint.

The heating elements shall be of the non-glowing design consisting of 80/20 nickel-chromium resistance wire, embedded in magnesium oxide and enclosed in a metal sheath to which metal plated fins are copper brazed. The elements shall be painted with aluminized paint for corrosion resistance and cover the entire discharge area for uniform heating. The heating elements shall be warranted for five years.

The fan motor shall be totally enclosed, permanently lubricated, impedance protected, and of unit bearing design suitable for horizontal or vertical operation with high starting and running torques. (5.0 & 7.5 KW units) The fan motor shall be totally enclosed, permanently lubricated, thermal protected, and of double bearing design with high starting and running torques. (10-30 KW units) The fan blade shall be aluminum and directly connected to the fan motor, designed specifically for unit heater application.

The fan control shall be of the bimetallic snap-action type and shall activate fan motor after heating elements reach operating temperature and continue to operate the fan motor after thermostat is satisfied and until the heating elements cool.

A thermal cutout shall be built into the system to automatically shut off the heater in the event of overheating and reactivate when temperature returns to normal.

The heater shall be provided with a factory installed, heavy duty, 3-pole contactor providing quiet, efficient operation, making external contacts and additional wiring unnecessary.

Heaters shall be IUH Series as manufactured by Berko®, a division of Marley Engineered Products®, Bennettsville, SC.

*Berko reserves the right to change specifications without prior notice.
