### ARCHITECT'S AND ENGINEER'S SPECIFICATIONS\*

Unit mounts either horizontally or vertically. Totally versatile. For factories, warehouses, garages, stores, shipping rooms, power stations, aircraft hangers. Can be used for primary, supplementary, spot, or dual-system heating.

Heavy gauge die-formed steel housing.

Advanced pull-through air flow design draws air across heating element for more even air distribution and cooler element operation.

Specially designed venturi outlet to meet that added throw as required in vertical position.

Completely enclosed fan motor.

Aluminum-finned, copper clad steel sheath heating element has longer useful life, because of cooler sheath temperature and faster heat dissipation.

Automatic reset linear thermal cut-out, capillary type, provides protection over entire length of element areas

Ruggedly built, yet lighter weight for easier installation. No piping flutes, valves, or traps.

Multiple wattage heat selector switch. Either 5KW or 3.3KW @ 240V (3.7KW or 2.5KW @ 208V) for just the right amount of heat.

Fan only switch allows fan to cycle automatically with elements or run continuously for air movement when no heat is required.

Built-in bi-metal thermostat. Range 40° to 90°F.

Heater is shipped with ceiling/wall bracket.

Meets all UL, NEC, and OSHA requirements.
